

ASG awarded South Korean MRI magnet contract

By AuntMinnieEurope.com staff writers

October 26, 2016 -- ASG Superconductors has been awarded a contract by Gachon University Gil Medical Center (GUGMC) in Incheon, South Korea, to build ultrahigh-field superconducting magnets.

The magnets will be produced by ASG in Italy and used to create a magnetic field of 11.74-tesla for neurological research and enhanced images of the brain.

The work will be performed on a joint basis with Korean company Magnex Scientific. ASG estimates the value of the contract at more than 10 million euros (\$11 million U.S.).

In the past, ASG has produced magnets for applications in oncological radiotherapy.
